Andres Monge

Front-End Architect, Senior Full-Stack Developer

Download PDF   xxxx@xxx (415) 619-8705

Profile

Translate requirements and mock-ups into fully functioning features using both, front-end (JavaScript) and back-end (Rails, nodeJS, mongoDB); Experience with common libraries and frameworks such as Polymer, Cordova, Angular, React, React-Native, Back-Bone.js, Express, Sails, Mongoose; Knowledge of optimizing code performance by following best practices, TDD, and code analyzers.

Skills

Team leader
Proven ability to lead and manage and development projects in team and independent situations. Assertively guided the team members into their self-taught capacities from a boot-camp into full complex component based project.

Fast learner
Successfully mastered and build a multi-platform with Polymer.Js, while I was learning it. I have done a couple of meet-ups explaining polymer, in order to fully understand it.

Result oriented (Agile)
When time is critical is preferred to write a code that works, rather than the best way to code it in order to meet the timing. Build a fully SPA (back and front ends) for managing personal finances, in less than two months.

Front-End

JavaScript, 8 years. Master

XHTML, 8 years. Master

CSS/SASS/LESS, 8 years. Master

(JS) Polymer 1 year

(JS) React 1 year

(JS) React-Native 1 year

(JS) FlighJS 1 year

(JS) AngularJS 2 year

(JS) BackboneJS 2 year

Back-End

PHP, 3 years. Advanced

nodeJS, 1 years. Standard

Ruby/Rails, 1 year. Standard

Databases

MySQL, 3 years. Advanced

mongoDB, 1 years. Standard

Servers

Linux, 10 years. Master

Apache, 3 years. Advanced

nginx, 3 years. Standard

Work Flows

Git, 5 years. Master

Svn, 3 years. Standar

Jira, 3 years. Advanced

Platforms

Cordova / iOs, 1 years. Standard

Cordova / Android, 1 years. Standard

Cordova / Windows Tablets, 1 years. Standard

Tools

Vi, 5 years. Master

MarkDown, 3 years. Master

Experience

TabletBanking @ s|ngular / BBVA Compass
Front-End team leader

(usa)

2015-2016

My responsibilities included to analyze and give project estimations and plans, monitor our teams quality code, improve team skills, code in front-end languages, implement TDD as much as posible. Also ensure the team is learning more skills and become more valuable. We created 200 different Polymer.js components, used bower to linking them all together in a Cordova App, which we deployed to iOs, Android and Windows tablets.

Hoy Necesito @ s|ngular / BBVA
Front-End team leader

(spain)

2014-2015

I was responsable of the estimation, analysis, development and maintenance of the module of the app that we as a team developed. Using ReactJS / AngularJS as our main framework, this project was also module oriented. We used GULP / GRUNT to deliver our code and gitflow to ensure code maintenance.

Online Banking @ s|ngular / BBVA Compass
Front-End developer

(spain)

2013-2014

I was responsable of the development and maintenance of the module of the app that we as a team developed. We were using FlighJS as our main framework, and under SCRUM workflow and using Gitflow. It was a project that relay heavily on template engines a few JavaScript components, which I was the main developer.

Component Catalogue @ Adesis / Mapfre
Front-End Architect / Expert Developer

(spain)

2013

I was responsible for code reviews, code analysis and quality assurance that the developers (from the architecture department) of the client (Mapfre) delivered. I had improve the current developers skills, practices and encourage them become better developers. Our main area of focus was JavaScript, Angular, CSS and Jade as the template engine.

Personal Finance Manager @ Adesis
Front-End Architect

(spain)

2013

In a little over a month and a half, I've develop by my self a fully operational finance manager. Provided with the graphical designes I build the app using nodeJS (sails) and AngularJs from scratch. I've made the all the decisions including the architecture, technologies and work-methodology.

RedPacientes, social network @ CBI
Full-Stack Developer

(spain)

2011-2013

Writing my back-end code mainly with SQL functions, and PHP s imply as a conector between SQL and JS (for the front-end). At this company I help developing modules of a big app they were creating. They wanted to create a CRM similar to SAP. This app was being supported by IE7 and greater besides modern browsers. Everything done with a proprietary framework which we also had to maintain and update.

No llores Patito
Full-Stack Developer

(spain)

2011

Online shop, created with a custom framework similar to CakePHP. The main focus was over the framework built on PHP, the front-end was basically tweaking a pre bough template.

Ananda Pascual
Full-Stack Developer

(spain)

2010

Online store for clothing. It's been made with osCommerce, and I've developed a few plugins to manage the landing page. I've also developed a TPV (payment conector) to integrate with CajaMar and CajaSol, and a API integration with real-time stock handling by external company "seleris".

Los hijos de la Malinche
Full-Stack Developer

(mexico)

2008-2010

Which is a electronic political and opinionated maganized. It mainly sponsored by the mexican newspape Reforma. I've used Drupal as the content manager, and created both back-end (the admin manager site) and front-end templates. Front-end has done with jQuery

Internship and S.E.O. @ KnowCentury
Full-Stack Developer

(spain)

2008-2009

I worked here as my internship the first six moths and after that I was laddering the new department of search engine optimization (SEO). One of my biggest achievements was holding on the words: "comprar oro" ("buy gold") as the second result for 5 months, and the first result for some days.
